Knowledge Organiser: year 4 - Sound

Careers connected to sound: audiologist, sound engineer

Lesson Sequence

1. Identify how sound is made

2. Explore how vibrations from sounds travel through a medium to the ear

3. Explore sound nsulation

4. Explore volume

5. Explore pitch

6. Explore sounds

How sounds are made and travel

When objects vibrate, a sound is made. The vibration makes the air around the object vibrate and the air vibrations enter your ear. These are called sound waves. If an object is making a sound, a part of it is vibrating, even if you cannot see the vibrations. Sound waves travel through a medium (such as air, water, glass, stone, and brick).

How do we hear?

The sound waves travel to the ear and make the eardrums vibrate. Messages are sent to the brain which recognises the vibrations as sounds.

The pitch of a sound is how high or low it is. A squeak of mouse has a high pitch A roar of a lion has a low pitch.

Low Frequency - Low Pitch - Low Sound

A high pitch sound is made because it has a high frequency. The sound source vibrates many times a second.

Volume

The volume of a sound is how loud or quiet it is. Quieter sounds have a smaller **amplitude** and less energy (smaller vibrations) and louder sounds have a bigger amplitude and more energy. The **closer** we are to a sound source the louder it will be. A train arriving at a station sounds loud. The further away from a sound the fainter it will be. A train in the distance sounds

quieter.

Before and After Test

How does sound travel?		before	after
In a curvy line			
In a straight line			
As a series of vibrations			
By making a noise			
The volume of sound is measured in	k	efore	after
decibels			
centimetres			
kilograms			
miles			
Sounds gets louder (tick 2)	b	efore	after
as we move further away from the source			
as we move closer to the source			
the less energy there is when creating the sound			
the more energy there is when creating the sound

92

The origin of the sound is called the	before	after
noise		
source		
vibration		
frequency		
The pitch of a sound describes	before	after
how fast or slow a sound is		
how loud or quiet a sound is		
how low or high a sound is		
When a sound hits the ear	before	after
nothing vibrates		
the eardrums vibrate		
the whole ear vibrates		
the brain vibrates		

Sound can travel through			
	Before	After	
the air			
water			
the floor			
all of the above			

A pupil blows through two different length straws. Which statement is true			
	Before	After	
The shorter straw will make a higher- pitched sound.			
The shorter straw will make a louder sound.			
The longer straw will make a higher- pitched sound.			
The longer straw will make a louder sound.

R

Rocket Words

	Vibration	Particles moving very quickly
	Medium	A substance such as air, water or a solid
	Source	The start of something
	Energy	The power to make something work, move or grow
	Materials	Anything used in making something or building
	Reflect	Bounce back from a surface
	Volume	How loud or quiet a sound is
anti-Mar.	Decibels	The unit to measure loudness
098	Pitch	How high or low a sound is
	Instruments	Objects used to play music
T	Particles	Tiny pieces that make up something larger
00	Sound source	The object that started the sound
